PROFESSIONAL SUMMARY

Senior Platform Engineer with 13+ years of experience designing and scaling cloud-native platforms, Kubernetes ecosystems, DevSecOps frameworks, AI platform infrastructure, and enterprise automation solutions across global organizations. Expertise in platform architecture, Kubernetes, GitOps, CI/CD modernization, Internal Developer Platforms (IDPs), cloud-native security, infrastructure automation, and AWS/Azure cloud environments. Experienced in building multi-tenant platform architectures, developer self-service capabilities, secure software delivery pipelines, platform observability systems, and AI/LLM enablement platforms. Strong background in platform governance, reliability engineering, API-driven automation, security, and engineering enablement. Built a career spanning software engineering, API automation, distributed systems, platform engineering, and cloud-native infrastructure, delivering scalable, secure, and developer-centric platforms that accelerate software delivery at enterprise scale.

CORE EXPERTISE

- Platform Engineering & Architecture: Kubernetes, Internal Developer Platforms (IDP), GitOps, Terraform, Platform Governance, Developer Self-Service, Multi-Tenant Platforms.
- AI Platform Engineering: RAG Systems, Kubeflow, MLflow, SageMaker, Lang fuse, AI Security & Guardrails.
- DevSecOps & Security: Secure SDLC, SAST/DAST, Kyverno, Container Security, RBAC, Supply Chain Security, OWASP LLM Top 10.
- Cloud, Automation & Development: AWS (EKS, ECR, S3, IAM, VPC, SageMaker), Azure (ACR, Blob Storage, Azure AD), Docker, Helm, GitLab CI/CD, ArgoCD, Python, FastAPI, REST APIs, Pytest, Locust.
- Observability & Reliability: Grafana, Prometheus, Loki, Azure Monitor, Telemetry, Platform Observability, Reliability Engineering.

PROFESSIONAL EXPERIENCE

Akamai Technologies — Senior Platform Automation Engineer

Bangalore, India & Tel Aviv, Israel | June 2020-June 2021

& July 2022 – Present

- Designed and maintained multi-tenant Kubernetes platform architectures supporting workload isolation, scalable onboarding, and developer self-service across engineering teams.
- Standardized enterprise CI/CD and GitOps workflows using GitLab CI/CD and ArgoCD, improving deployment reliability, governance, and operational consistency.
- Built reusable Helm-based platform frameworks enabling standardized deployments, developer self-service, and accelerated onboarding across engineering teams.
- Developed Python and API-driven automation frameworks for CI/CD orchestration, platform workflows, operational validation, and service integrations.
- Drove platform observability initiatives using Grafana, Prometheus, and Loki, improving operational visibility and telemetry across cloud-native environments.
- Integrated DevSecOps controls into CI/CD pipelines including SAST, DAST, container scanning, policy enforcement, and automated remediation workflows.
- Implemented policy-as-code governance using Kyverno across Kubernetes environments to standardize security and compliance controls.
- Integrated Wiz, Snyk, Vulcan, SonarQube, and container security tooling into platform engineering workflows.
- Designed AI/LLM platform enablement capabilities supporting secure deployment, evaluation, observability, governance, and lifecycle management.

- Implemented AI security and reliability controls including prompt-injection detection, adversarial testing, response validation, and AI guardrail workflows.
- Extended ML platform workflows using Kubeflow, MLFlow, Airflow, and SageMaker for reproducible and scalable AI infrastructure enablement.
- Built intelligent platform analytics including CI/CD summarization models and GitLab repository-level anomaly detection systems.
- Collaborated with globally distributed engineering teams across India and Israel on platform modernization, architecture governance, and secure cloud-native engineering enablement initiatives.

Safran Engineering — SDET II (Platform Automation & Distributed Systems)

Wessling, Germany | Sep 2021 – Jun 2022

- Developed Python-based backend automation systems for distributed in-flight entertainment and edge-computing platforms.
- Designed API and protocol-level automation and validation frameworks for embedded and network-connected systems.
- Worked on distributed platform reliability across Bluetooth, Wi-Fi, and Raspberry Pi-based edge-device ecosystems.
- Built operational analysis utilities using Python and Pandas to support engineering optimization and product reliability.
- Validated real-world networking behavior and distributed system communication across aviation-focused embedded environments.
- Collaborated with international engineering teams in Germany on enterprise aviation platform systems.

Infoblox — Software Engineer II

Bangalore, India | Feb 2018 – June 2020

- Built Python-based automation frameworks and API-driven validation systems for enterprise networking and DNS infrastructure.
- Automated backend workflows and service validations for distributed systems operating at enterprise scale.
- Integrated vulnerability analysis and security validation capabilities into engineering workflows and automation pipelines.
- Worked on infrastructure telemetry analysis and ML-assisted anomaly detection concepts for operational and security insights.
- Contributed to platform stability, reliability engineering, and infrastructure automation initiatives.

CenturyLink Technologies — Software Test Engineer

Bangalore, India & USA | Nov 2014 – Feb 2018

- Supported backend automation and CI/CD enablement for telecom-scale distributed systems and microservices platforms.
- Integrated automated validation workflows into build and deployment pipelines supporting release engineering initiatives.
- Collaborated with engineering and operations teams to improve platform stability, resiliency, and release reliability.
- Contributed to large-scale billing and transaction system reliability initiatives across enterprise telecom environments.

Thomson Reuters — Systems Engineer

Bangalore, India | Apr 2013 – Nov 2014

- Supported enterprise platform deployments and stability initiatives across distributed systems.
- Collaborated with cross-functional teams to improve release quality and operational readiness.
- Contributed to high-availability and resilience practices for critical systems.

EDUCATION

- PGDM in Machine Learning & AI — IIIT Bangalore
- Bachelor of Engineering (Electronics & Communication) — SDMIT, VTU Belagavi

CERTIFICATIONS

- Microsoft AZ-500 ● Certified Ethical Hacker (CEH) – EC Council ● CKAD, Helm & Kubernetes Certifications – Udemy

AWARDS & RECOGNITION

- CenturyLink Performance Award (2018) ● Akamai Wizards Predictive: Autoscaling in Cloud Observability
